

# Notes: BPL\_TEST2\_PID\_Fedbatch\_reg

This notebook just produce the Figure 6 in the paper "Design ideas behind Bioprocess Library for Modelica", by J P Axelsson, presented in the 15th International Modelica Conference in Aachen, Germany, October 9-11, 2023.

Test run for in BPL\_TEST2\_PID test-case fedbatch\_reg that demonstrate substrate control of the feed flow around fixed exponential dosage scheme. Note, that here is a small drift from  $\mu_{ref}$  at the end.

**Note** For the JModelica compilation the derivative part and thus Td, and N cannot be used. Likely due to usage of MSL 3.2.2

```
In [1]: run -i BPL_TEST2_PID_Fedbatch_reg6_explore.py
```

Windows - run FMU pre-compiled JModelica 2.14

Model for bioreactor has been setup. Key commands:

- par() - change of parameters and initial values
- init() - change initial values only
- simu() - simulate and plot
- newplot() - make a new plot
- show() - show plot from previous simulation
- disp() - display parameters and initial values from the last simulation
- describe() - describe culture, broth, parameters, variables with values/units

Note that both disp() and describe() takes values from the last simulation

Brief information about a command by help(), eg help(simu)

Key system information is listed with the command system\_info()

```
